

McLaren Software Releases Enterprise Engineer Web Services

Extending the reach of Enterprise Engineer to people and processes across the enterprise.

Houston, Texas 24th February 2009 - McLaren Software, a leading Enterprise Content Management (ECM) Applications developer specializing in asset-centric document management, announces the release of Enterprise Engineer™ Web Services.

The availability of Enterprise Engineer™ Web Services is an indication of both the maturity of Enterprise Engineer™ as a leading asset documentation and business process application suite and the demand to integrate content and data management technologies to provide customer solutions.

Enterprise Engineer™ Web Services include; the McLaren Search Service to provide the ability for SAP™ and Maximo™ users to search for specific documentation, the McLaren Simple Object Service allows an external application to automatically create objects (i.e. documents) managed by Enterprise Engineer™ within either an EMC - Documentum™ or IBM - FileNet P8™ repository. The McLaren Java Class Data Provider allows the creation of a custom Java class to populate Enterprise Engineer dynamic dialogs with data from an external source, such as a file, database or web service.

“Having recently reached the 100th Enterprise Engineer™ customer milestone the demand for further integration with a range of enterprise applications can now be met with the release of Enterprise Engineer Web Services and integration components. The value of an Enterprise Engineer installation can now be increased by extending its reach to a wider group of users requiring access to validated engineering documentation without leaving their primary application” comments Susan Trueman, Product Manager McLaren Software.

About McLaren Software - The Asset Documentation Integrity company

McLaren Software develops enterprise scale engineering documentation and business process applications. Enterprise Engineer leverages enterprise content management (ECM) and collaboration technologies from EMC, IBM, Microsoft and Autodesk.

Enterprise Engineer is designed for companies in asset intensive markets, including oil & gas, energy & utilities, life sciences, transportation, natural resources, process manufacturing and healthcare or any organization dependent on large operational assets for revenue generation or service provision.

McLaren's Enterprise Engineer application suite helps ensure the integrity of documentation and business processes associated with operational assets and engineering projects. Enterprise Engineer is proven to reduce costs, lower the risk of non-compliance, improve efficiency and accelerate project execution.

Headquartered Glasgow Scotland and Houston Texas McLaren has offices in Dusseldorf Germany and partners in North America, Europe, Middle East, South East Asia and Australia.
